

Ultra Peel® Forte with Ultra Peel® II

Ultra Peel® Forte will effectively treat aging skin, pigment disorders, smokers' skin and photodamaged skin. The most suitable candidates for this more active TCA treatment are those with resilient skin who have more dramatic wrinkling, sun damage and acne scarring. This 20% TCA formulation is ideal for aging skin in need of rejuvenation. Post-treatment exfoliation can be increased with the application Ultra Peel® II following the liquid peel application. This retinoid booster helps increase cell turnover to keep skin looking fresh. Overall, the final result of this combined treatment will be improved tone and texture, and plump, luminous skin.

Trichloroacetic acid is a versatile chemoexfoliative agent with no systemic toxicity, widely viewed as the gold standard of chemical peeling.^[1,2] It is utilized for the reversal of some typical signs of photoaging - fine lines and wrinkles, sun elastosis, actinic keratosis and pigmentary disorders like melasma and post-inflammatory hyperpigmentation.^[3,4,5]

clinical information

In a study of six patients receiving a total of four treatments utilizing Ultra Peel® Forte and Ultra Peel® II in conjunction with age controlling support products over a 19-week period, the investigating clinicians reported 60% of patients showing at least moderate improvement in texture, wrinkles and pigmentation.

before

condition:
uneven surface texture and wrinkling

after

treatment:
Professional treatments (four):
• Ultra Peel® Forte with Ultra Peel® II
